

Turfgrass Sample Collections

All turfgrass samples should include:

- A sample approximately the size of a “cup-cutter” or a 3 x 3 x 3 inch triangle.
- Collect sample from the area where disease is advancing – include area where the grass has symptoms and where no symptoms exist; Do not collect samples from completely dead or bare areas.
- Include roots and underlying soil (up to 3 inches thick).
- Wrap each sample in a moist (not soaking wet) paper towel and place it in a plastic bag.
- Carefully pack the samples in a cardboard box. Stuff the box with newspaper or packing material, so that the samples are held securely in the box for transport.
- Overnight shipping provides us a fresh sample and usually results in faster turnaround.
- Fill out the “Sample Submission Form” completely and place it in a plastic bag to keep it clean, and put it in the box with the sample. Please include your address and phone number.
- If you want to include photos please email to turfdiagnostics@optonline.net.

Submit samples to:
